

## **Job Title: Advanced Manufacturing & Robotics Manager**

### **Welcome to Mirmil Products!**

**What We're Looking For:** The Advanced Manufacturing & Robotics Manager is accountable for developing, fabricating, implementing, testing, documenting, maintaining, supporting and improving control system solutions across the manufacturing facility.

### **Responsibilities of the Role:**

- Initiate, conduct and direct robotic programming activities and system communication tasks (controls, electrical, mechanical and project management) through to project completion
- Ensure and constantly improve the safety, morale, quality and profitability of our operations through the ongoing implementation of effective methods and strategies
- Create, monitor and maintain a well kept, organized and safe work environment while promoting and enforcing adherence to safety guidelines, policies, programs, laws, regulations and protocols
- Program, test and debug robots and control systems
- Conduct research into the feasibility, design, operation and performance of mechanisms, components and systems and suggest and source as required
- Use and interpret analytical techniques to verify or select alternate design approaches
- Deploy advanced technologies to sustain and grow our market position
- Document, monitor and communicate on project progress and develop strategies to meet deadlines
- Supervise and inspect the installation of mechanical systems
- Ensure efficient collaboration and coordination between departments for job completion
- Develop maintenance standards, schedules and programs
- Investigate mechanical failures or unexpected maintenance problems
- Participate in meetings for tooling design and system development
- Provide service and support to employees using the systems
- Prepare detailed documentation of procedures and systems
- Maintain a high level of confidentiality at all times

### **What You Offer:**

- Strong critical thinking and analytical skills to resolve issues quickly
- Approaches problem solving with innovation and creativity
- Proven interpersonal, written and oral communication skills to effectively interact with people at all levels of the organization
- Excellent time-management and multi-tasking skills with an ability to work under resource constraints in a fast-paced environment

- Highly motivated, participative leader with a proactive approach
- Strong collaboration and coordination abilities to pull groups together to achieve success
- Organized with attention to detail
- Demonstrated ability to work both independently and as part of a team
- Enthusiasm and willingness to learn
- Fluidity to work with projects based on the imperial system of measurement

**Key Requirements** (education/certifications/licences/passport/clean drivers abstract):

- Engineering degree or engineering technician/technologist diploma
- Experience with 3D CAD, blueprint reading, PLC Programming and HMI Design
- Prior work experience working in an industrial manufacturing environment
- Experience with Microvellum software is an asset

**Wage / Schedule:**

- From \$65,000 annually (salaried)
- Monday – Friday, 7:30am – 4:30pm

**We look forward to meeting you!**
